

Human KvLQT1/minK Channel Stable Cell Line

Host cell:	Human embryonic kidney (HEK)
Gene name:	KCNQ1/KCNE1
Growth media:	DMEM, 10% FBS
Storage:	Frozen under liquid nitrogen
Functional characteristics:	Mean current amplitude \pm SE = 1.7 ± 0.1 nA (n=152)
Assay Platform:	Manual or automated patch clamp
Note:	KvLQT1/minK comprise the pore forming and auxiliary subunits of the slow component (I_{Ks}) of the delayed rectifier potassium current (I_K).

Data:

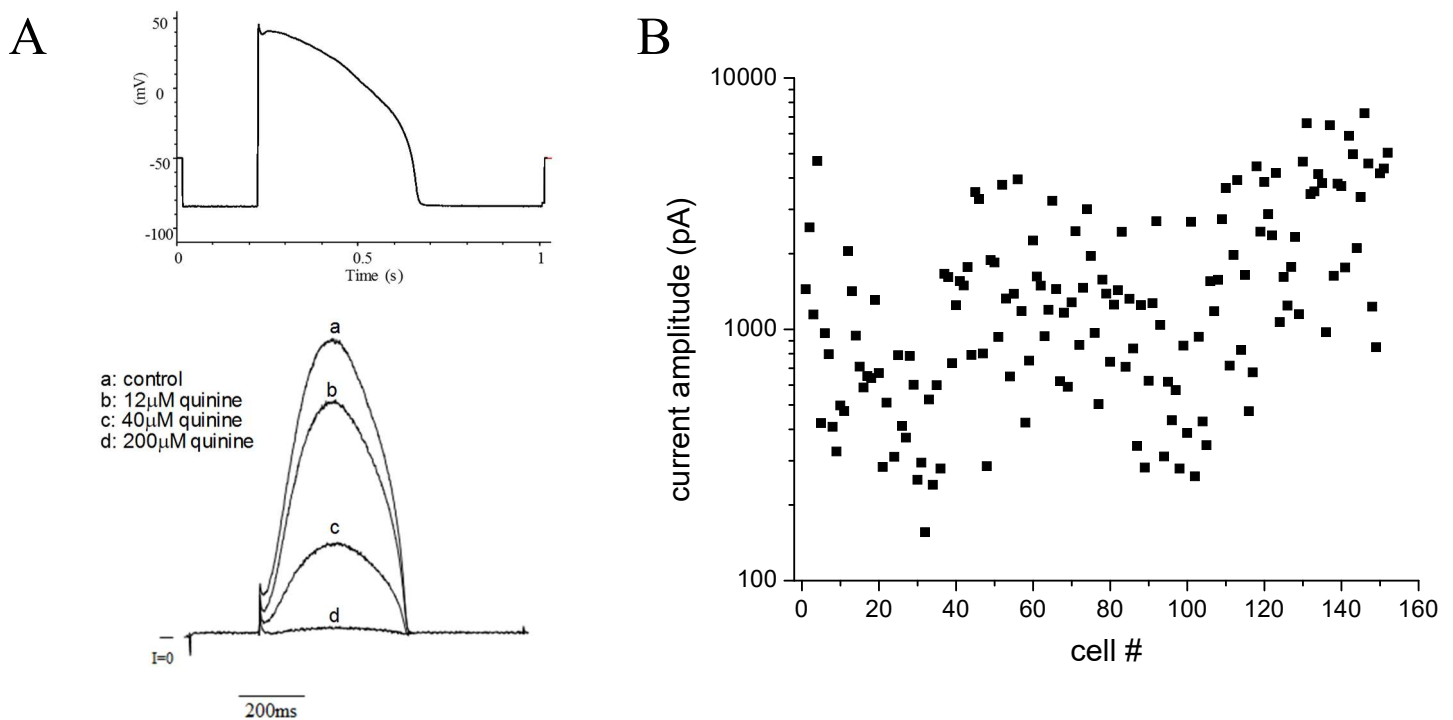

Figure: A. Recording of KvLQT1/minK current elicited by a ventricular action potential waveform in the absence and presence of quinine. B. Current amplitude plot taken from 152 cells. All recordings were performed at 37°C using manual patch clamp.
